OILY WASTE CANS FOOT OR HAND OPERATED

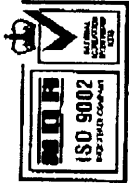

Oily Waste Cans are essential wherever waste solvent cloths and wiping rags are used. Protects flammable materials from fuel producing sparks, smoker carelessness, and spontaneous combustion. Can remains closed when not in use. When operated by hand or foot, cover opens to a 60° angle, closes automatically when released.

Round construction and elevated bottom encourages circulation of air around can to disperse heat and prevent spontaneous combustion. New one piece cover facilitates the use of disposal collection bags. Emptying the oily waste can is quick and easy.
