Chapter 1 – Device Overview

Description

The SocketModem® Cell cellular modem is a complete, ready-to-integrate communications device that offers standards-based quad-band HSPA 7.2 performance. This quick-to-market communications device allows developers to add wireless communication to products with a minimum of development time and expense. The SocketModem Cell cellular modem is based on industry-standard open interfaces and use Multi-Tech's Universal Socket design.

Product Build Options

Product	Description	Region
MTSMC-H3-U-P1	Quad-Band HSPA 7.2 Modem – AT&T/Euro – 5V - USB	US Europe
MTSMC-H3-IP-P1	Quad-Band HSPA 7.2 Modem with Universal IP – AT&T/Euro – 5V-Serial	US Europe
MTSMC-H3-MI-IP-P1	Quad-Band HSPA 7.2 Modem with Universal IP – AT&T/Euro – 5V – Serial/USB/GPIO	US Europe
Developer Kit		
MTSMI-UDK	Universal Developer Kit	Global

Notes:

These units ship without network activation. To connect them to the cellular network, you need a cellular account. For more information, refer to Account Activation for Cellular Devices in the Universal Socket Developer's Guide.

HSPA (High-Speed Uplink and Downlink Packet Access)/UMTS (Universal Mobile Telecommunications System).

MI devices have multiple interfaces.

U devices have direct USB connectivity

All builds can be ordered individually or in 50-packs.

The complete product code may end in .Rx. For example, MTSMC-H3.Rx, where R is revision and x is the revision number.

Notes:

Radio performance may be affected by temperature extremes. This is normal. The radio is designed to automatically fallback in class and reduces transmitter power to avoid damage to the radio. When this occurs depends on the interaction of several factors, such as ambient temperature, operating mode, and transmit power.

Mounting Hardware

#4 or M2/M3 hardware should be used for mounting the SocketModem to the board. Refer to the Mechanical Drawings for more information.

Important:

There are traces and vias around the tooling holes, so use nylon hardware if you are using the tooling holes to mount the SocketModems on the board.

Device Reset

The SocketModem is ready to accept commands after a fixed amount of time ("X" Time) after power-on or reset.

Model	Time Constant	"X" Time	Minimum Reset Pulse ¹
MTSMC-H3	250 ms	10 seconds	200us

¹The SocketModem may respond to a shorter reset pulse.

ON	Depending on call type: Voice Call: Connected to remote party. Data Call: Connected to remote party or parameter exchange while call is set up or disconnected.

Serial Model Pinout

For MTSMC-H3-IP

Pins available with current PCB: 24, 26, 33-41, 61, 63

USB Data Pinout

For MTSMC-H3-U, MTSMC-H3-MI-GP

Pins available with current PCB: 24-28, 33-41, 48-51, 58, 61, 63

Design Consideration

The current PCB does not accommodate the following pins: 22-23, 42-43, and GPS data pins 15-17. These pins will be present on a future hardware design. Take these pins into account in your product design, even if you have no plans for using them.

Power Measurements

Multi-Tech Systems, Inc. recommends that you incorporate a 10% buffer into your power source when determining product load.

¹**Maximum:** The continuous current during maximum data rate with the radio transmitter at maximum power.

²**Peak:** The peak current during a GSM850 transmission burst period.

³**In-Rush Current:** The input current during power up or a reset.

Chapter 4 – FCC and Industry Canada Information

The following is device specific FCC and Industry Canada information. For additional approval and regulatory information, see the Universal Socket Developer Guide.

FCC Grant Parts 22 and 24

FCC Identifier	AU792U09J14828
Equipment Class	PCS Licensed Transmitter
Notes	SocketModem iCell
Approval	Single Modular

24E	1852.4 - 1907.6	0.18	0.02 PM	4M20F9W

Output power listed is conducted for GSM and average conducted for WCDMA.

This device is to be used in mobile or fixed applications only. Antenna gain including cable loss must not exceed 7.82 dBi in the 850 MHz Cellular band and 3.5 dBi in the PCS 1900 MHz band, for the purpose of satisfying the requirements of 2.1043, 2.1091, 22H and 24E.

The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20cm from all persons and must not be co-located or operated in conjunction with any antenna or transmitter. The final product operating with this transmitter must include operating instructions and antenna installation instructions, for end-users and installers to satisfy RF exposure compliance requirements.

Compliance of this device in all final product configurations is the responsibility of the Grantee. Installation of this device into specific final products may require the submission of a Class II permissive change application containing data pertinent to RF Exposure, spurious emissions, ERP/EIRP, and host/module authentication, or new application if appropriate.

This device contains GSM functions that are not operational in the U.S. Territories. This filing is only applicable for U.S. operations.

Certification of equipment means only that the equipment has met the requirements of the above noted specification. License applications, where applicable to use certified equipment, are acted on accordingly by the issuing office and will depend on the existing radio environment, service and location of operation. This certificate is issued on condition that the holder complies and will continue to comply with the requirements of the radio standards specifications and procedures issued by Industry Canada.

La certification du matériel signifie seulement que le matériel a satisfait aux exigences de la norme indiquée ci-dessus. Les demandes de licences nécessaires pour l'utilisation du matériel certifié sont traitées en conséquence par le bureau de délivrance et dépendent des conditions radio ambiantes, du service et de l'emplacement d'exploitation. Le présent certificat est délivré à condition que le titulaire satisfasse et continue de satisfaire aux exigences et aux procédures d'Industrie Canada.

Chapter 5 – Application Notes

LED Interface

The LED signal indicates the SocketModem working status.

LED 1 – Heartbeat – IP Builds Only

LED 1 Signal	Heartbeat LED
OFF	No power to the unit.
Blinking	Power on.

LED 2 – Link Status – All Builds

LED 2 Signal	Link Status LED
OFF	No power to the unit.
ON	Continuously lit Radio is enabled.

RF Performances

RF performances are compliant with the ETSI recommendation 05.05 and 11.10. The module's radio transceiver meets the requirements of 3GPP Release 5 & 6. All values indicated are conducted.
