### Functional Diagram

General Description

The HMC424G16 is a broadband 6-bit GaAs IC digital attenuator in a 16 lead glass/metal (hermetic) surface mount package. Covering DC to 3 GHz, the insertion loss is less than 3 dB typical. The attenuator bit values are 0.5 (LSB), 1, 2, 4, 8, and 16 dB for a total attenuation of 31.5 dB. Attenuation accuracy is excellent at ±0.5 dB typical step error with an IIP3 of +32 dBm. Six control voltage inputs, toggled between 0 and -5V, are used to select each attenuation state at less than 70 µA each. A single Vee bias of -5V allows operation at frequencies down to DC.

### Electrical Specifications, T_A = +25° C, With Vee = -5V & Vctl = 0/-5V

Pin Descriptions

| Pin Number	Function	Description	Interface Schematic
1, 12-16	V1 - V6	See truth table and control voltage table.	
2, 4-6, 8, 9, 11	GND	Package bottom must also be connected to RF/DC ground.	
3, 10	RF1, RF2	These pins are DC coupled and matched to 50 Ohm. Blocking capacitors are required if RF line is not equal to 0V.	
7	Vee	Supply Voltage -5V ±10%	

Suggested Driver Circuit
(One Circuit Required Per Bit Control Input)
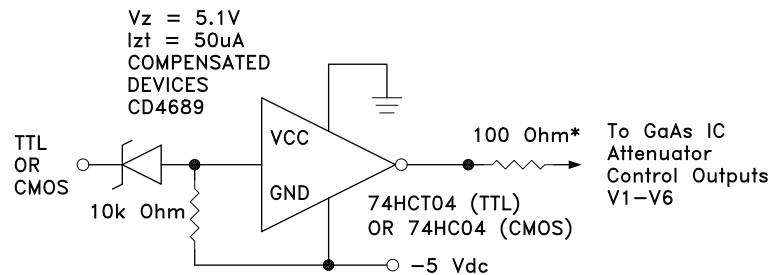

*Simple driver using inexpensive standard logic ICs provides fast switching using minimum DC current. * Recommended value to suppress unwanted RF signals at V1 - V6 control lines.*

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and package bottom should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
