Note:

- All specifications measured at  $T_A=25^\circ\text{C}$ , humidity<75%, nominal input voltage and rated output load unless otherwise specified.
- When product begins to work, temperature may rise slowly until stabilize. It's normal that output voltage derating and efficiency reduce about 2 percent during this process.
- Only typical model listed. If you need other model of this series (same power and package), please confirm input and output voltage, then phone us.
- No parallel connection or plug and play.
- The CTRL pin voltage is referenced to GND.
- If product has no use for CTRL pin, it's name will change, add "X" in front of "MP" to distinguish.

## EFFICIENCY CURVE

### ① Efficiency Vs Load

### ② Efficiency Vs Input voltage

## APPLICATION NOTE

### Recommended Circuit

All the URB\_MP-12W Series have been tested according to the following recommended testing circuit before leaving factory. If you want to further decrease the input ripple,  $C_{in}$  is recommended to use 100uF. If ripple and noise are required, you can increase capacitance of  $C_{out}$  properly. However, the capacitance should not be higher than Max capacitance.
