

AC/DC Current transducer AHR-B420

The transducer for the electronic measurement of DC & distorted AC waveform currents, with galvanic isolation between the primary circuit (power) and the secondary circuit (measurement).

True r.m.s. 4-20 mA current output.

$$I_{PN} = 500 \dots 2000 \text{ A}$$

Features

- DC + distorted AC waveform currents measurement
- True r.m.s. output
- Busbar or panel mounting
- Split core type
- Insulated plastic case recognized according to UL94-V0.

Advantages

- High isolation between primary and secondary circuits
- Eliminates insertion loss
- Easy installation.

Applications

- **AC power supplies or Motors:**
True r.m.s. current sensing - the most accurate way to monitor power supply or motor input power
- **VFD Controlled Loads:**
VFD output current monitoring to indicate how the motor and the attached load are operating
- **SCRs or Switch-mode Rectifiers:**
Accurate measurement of output current
- **Renewable Energy Installations or Backup Batteries:**
Continuous condition monitoring allowing automatic failure detection/anticipation.

Note : ¹⁾ The max. peak AC current is the highest peak level of the primary signal that is taken into account for accurate true r.m.s. calculation. Yet the device is designed for maximum continuous true r.m.s. value equal to I_{PN} , whereas the output is limited by the above specified output limitation.

Safety

This transducer must be used in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating instructions.

Installation and maintenance should be done with main power supply disconnected.

The operator must have an accreditation to install this material.

Caution! Risk of electrical shock

When operating the transducer, certain parts of the module can carry hazardous voltage (e.g. primary conductor).

Ignoring this warning can lead to injury and/or cause serious damage.

The user must take care of all protection guarantee against electrical shock.

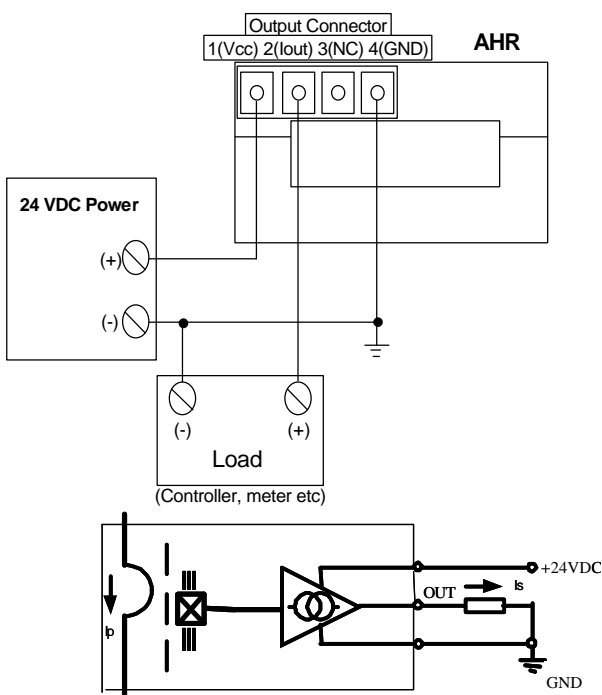

This transducer is a built-in device, whose conducting parts must be inaccessible after installation. A protective housing or additional shield could be used.
