1 Introduction

1.1 Overview

The **ASDHS-MLC64G** Half-Slim SATA 6 Gb/s MLC Solid State Drive (SSD) delivers leading performance a JEDEC MO-297 Half-Slim form factor while simultaneously improving system responsiveness for mobile applications over standard rotating drive media or hard disk drives. By combining leading NAND flash memory technology with our innovative high performance firmware, ADLINK delivers a SSD for native Serial Advanced Technology Attachment (SATA) hard disk drive drop-in replacement with enhanced performance, reliability, ruggedness and power savings, since there are no rotating platters, moving heads, fragile actuators, or unnecessary delays due to spin-up time or positional seek time that can slow down the storage subsystem significantly I/O and throughput performance improvement as compared to rotating media or hard disk drives. This document describes the specifications of the **ASDHS-MLC64G** Half-Slim SATA 6 Gb/s MLC SSD in Half-Slim (JEDEC MO-297) form factor.

The **ASDHS-MLC64G** Half-Slim SATA 6 Gb/s MLC SSD primarily targets SATA based laptop PCs, highly rugged mobile client devices, as well as thin and light, mini/sub-notebooks. Key attributes include high performance, low power, increased system responsiveness, high reliability, and enhanced ruggedness as compared to standard mobile SATA hard drives. The **ASDHS-MLC64G** Half-Slim SATA 6 Gb/s MLC SSD is available in 2.5" and Half-Slim form factors that are electrically, mechanically, and software compatible with existing 2.5" Serial ATA slots and cables. Our flexible design allows interchangeability with existing mobile hard drive based on the SATA interface standard.

1.6 Architecture

The **ASDHS-MLC64G** Half-Slim SATA 6 Gb/s Solid State Drive (SSD) utilizes a cost effective system-on-chip (SoC) design to manage a full SATA 6 Gb/s bandwidth with the host while managing multiple flash memory devices on multiple channels internally.

1.7 Hot Plug Support

Hot Plug insertion and removal are supported when the correct connector and an appropriate operating system (OS) are used as described in the SATA 3.0 Specification. This product supports asynchronous signal recovery and will establish communications with a host system without hardware device detection by issuing an unsolicited COMINIT when first mated with a powered connector.
