## Notes:

1. Derate linearly from $50{ }^{\circ} \mathrm{C}$ as shown in Figure 6.
2. The transient peak current is the maximum non-recurring peak current that can be applied to the device without damaging the LED die and wirebond. It is not recommended that this device be operated at peak currents above the Absolute Maximum Peak Forward Current.

| HLMP-KB45-A00xx | 30 | 45 | 462 | 426 | 40 |

## Notes:

1. The dominant wavelength, $\lambda_{\mathrm{d}}$, is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
2. $\theta_{1 / 2}$ is the off-axis angle at which the luminous intensity is half of the axial luminous intensity.

## Soldering/Cleaning

Cleaning agents from the ketone family (acetone, methyl ethyl ketone, etc.) and from the chlorinated hydrocarbon family (methylene chloride, trichloroethylene, carbon tetrachloride, etc.) are not recommended for cleaning LED parts. All of these various solvents attack or dissolve the encapsulating epoxies used to form the package of plastic LED parts.

For information on soldering LEDs, please refer to Application Note 1027.
