■ **DESCRIPTION**

AA8600AP is a Y/C mix with 6db gain, 75Ω output buffer and SAG correction. The 75Ω buffer is capable of driving two circuits. The SAG could reduce the capacitance of output coupling capacitor. The Y signal is clamped input, while the C signal is biased input. The power saving circuit provides the output and chrominance muting function. The IC is available in 8-pin TSSOP.

■ **PIN DESCRIPTION**

Symbol	Pin-No	Type	Function
MUTE	1	I	Output is muted as this pin is set to high
YIN	2	I	Composite Y input signal is clamped input
GND	3		Ground
CIN	4	I	Chrominance C input signal is bias input
MUTC	5	I	Only chrominance output signal is muted as this pin is set to high
SAG	6	O	SAG correction to reduce the capacitance of output coupling capacitor
OUT	7	O	Y/C mix output. As it is less than 0.6V, the protect circuit is triggered to enable the power saving function
VCC	8		Power supply

■ **ABSOLUTE MAXIMUM RATING**

Ta = 25

Parameter	Symbol	Rating			UNIT	CONDITION
		MIN	TYP	MAX		
Supply Voltage	Vcc	-0.3		8	V	
Operating Ambient Temperature	Ta	-25		75		
Storage Temperature	Ts	-55		125		

NOTE : Stress above those listed under “Absolute Maximum Rating” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for the extended periods of time may affect device reliability.
