1. Basic Specifications

1.1 Display Specifications

Item	Description	Note
Resolution	240 × RGB × 320	
Display mode	TFT, Normally White, Transmissive	262K Color
Viewing direction	6 O'clock	
Driving method	720Ch-Source, 320Ch-Gate	
Backlighting	LED, White (4 chips in Serial)	
Diver IC	R61505U, COG	
Others	8/9/16/18-Bit, 80-Series	

1.2 Mechanical Specifications

Item	Specification	Unit
Module Size (W × H × T)	39.6 × 56.0 × 2.30	mm
Viewing Area (W × H)	-	mm
Active Area (W × H)	33.48 × 44.64	mm
Dot Size (W × H)	0.037 × 0.131	mm
Dot Pitch (W × H)	0.047 × 0.141	mm
Weight	About 9	g

2. Electrical Characteristics

2.1 Absolute Maximum Ratings

Item	Symbol	Value			Unit	Condition	Remark
		Min.	Typ.	Max			
Supply Voltage Range	Logic	V _{CC}	-0.3	-	5.0	V	T _a =25℃
	LCD	V _{GH-VGL}	-0.3	-	35	V	T _a =25℃
			-	-	-	V	T _a =26℃
Input Voltage	V _{IN}	-0.3	-	V _{CC}	V	T _a =25℃	

2-2 Environmental Conditions

Item	Symbol	Min.	Max.	Unit
Operating temperature	T _{opr}	-20	70	℃
Storage temperature	T _{stg}	-30	80	℃
Humidity (Ambient temperature=T _a)	T _a ≤ 60℃	90% RH max.		

2-3 DC Characteristics

Items	Symbol	Spec. Value			Unit	Condition	
		Min.	Typ.	Max.			
Operating voltage	Logic	V _{CC}	2.72	2.8	2.88	V	
		IOV _{CC}	1.78	1.8	1.83	V	
	GATE	V _{GH-VGL}	18	-	26	V	Note 1)
Supply current	ICC	-	6.0	9.0	mA	Note 2)	
Input voltage	High level	V _{IH}	0.8 × IOV _{CC}	-	IOV _{CC}	V	-
	Low level	V _{IL}	-0.3	-	0.2 × IOV _{CC}	V	-

Note 1) The value can be adjusted by software to optimize display quality

Note 2) Display White

9. LCD Module Out-Going Quality Level

(1.0) Purpose

The LCD specification provides outgoing provision and its expected quality level based on our outgoing inspection of LCD.

(2.0) Applicable Scope

The LCD specification is applicable to the arrangement in regard to outgoing inspection and quality assurance after it.

(3.0) Quality Specification

(3.1) Quality Level

The quality level of HYES are based on GB/T2828.1, Apply Level II, normal inspection by single sampling.

Rank	Item	AQL	Note
Major(MA)	Segment Short, Missing	0.65	
	Solder Bridging, Cold Solder		
	Outside Dimension		
Minor (MI)	Black Spots, White Spots, Foreign Substance, Pinhole, Segment Deformation, Scratches(Glass & Pol.) Air Bubbles between Glass & Polarizer, Color Variation, Solder Ball, Misalignment	1.0	

Note) AQL- Acceptable Quality Level

(3.2) Appearance Standards

1) Inspection Conditions

The LCD shall be inspected under 20W white fluorescent lamp light.

The distance between the eyes and the sample shall be 30cm.

All directions for inspecting the sample should be within 30° to perpendicular line.

2) Definition of the Area

Date : Apr. 18, 2008

(4.0) Reliability Condition

Item	Content
Room Temperature Operation	50,000 hrs

(4.1) Reliability Test - Module Middle Reliability

No.	Item	Condition	Test Time	Sample Numbers	Criteria (Acc/Rej)	Note
1	High Temp Operation	70 ± 2 °C	120 hrs	3	0/1	
2	Low Temp Operation	-20 ± 2 °C	120 hrs	3	0/1	
3	High Humidity Storage	60 °C 90%rh	120 hrs	3	0/1	
4	Thermal Shock	30mn stage -20 °C ↔70 °C	100 cycles /6days	3	0/1	

(4.2) Criteria

- a. No changes for indication and appearance.
- b. Leave the all samples under room temperature 4 hours after reliability test ends.

10. LCD Module Operation Instruction

Part I. How to use the LCD Module

1. Don't hit the LCD Panel in any way because the LCD is made of glass.
2. Don't clean the surface of LCD with hard things. Please clean LCD with Air-gun or very soft cloth when necessary. The protective film on the POL can be removed just before assembly, otherwise, dust, spit or other foreign matter may attached on the LCD under the protective film. After the protective film is removed, only air-gun can be used to remove any dust or foreign matter. Fingure or cloth MUST NOT be used in such cases.
3. No chemical liquid is allowed to clean the LCD, such as alcohol, acetone and IPA. All of these candamage the LCD. Water on the LCD must be cleaned as soon as possible, for it will cause POL color change or other defect.
4. Please move and assemble LCD very carefully during assembly, and don't push or twist it.
5. Don't damage the FPC of LCD module. It will cause permanent defect.
6. Don't disassemble LCD module. It will cause permanent defect.
7. Don't expose LCD module under sunshine, strong fluorescence or ultraviolet radiation.
8. Please make sure that operators wear static-protective bands effectively and working tables are effectively earthing during operation.
9. Please place LCD module on the tray provided by HYES while moving it, in order to avoid mechanical damage. Hold the module's side frames to avoide damage during moving.
10. Don't twist, disassemble, squeeze or hit the PCB. It will damage the circuit or component on PCB and cause functional defect.
11. Please use the connector according to the instruction provided by HYES.
12. Please place dual module with the sub-panel upward. Trays should be placed in contrary direction. An empty tray should be placed on the top.
13. Sealing operation on PCB must be very careful to avoid short or cut the original circuit on PCB. Otherwise, it will cause permanant damage to the LCD.
14. Don't add direct DC or high voltage to LCD panel. It will cause functional damage to the LCD or shorten the life of LCD product.
15. LCD may respond slowly or display abnormally in extrem temperature (lower than -20°C or higher than 50°C). But this doesn't mean LCD functional defect. LCD will display normally in regular temperature. Therefore, don't use LCD product in extrem temperature.

16. Don't push the display area of LCD panel, it will cause abnormal display. This doesn't mean LCD functional defect, neither. LCD will display normally in regular temperature.
17. Electrical test of LCD product is made by using mobile phone provided by Customer. We can use special test equipment to do the test, also.
18. The black band on IC on LCD product is used to protect the IC from light. Please do NOT remove it.
19. Please take great care to use connector. Customer should be responsible for connector defect caused by operation on Customer side.

Part II Storage

1. Physical status of liquid crystal will change in extrem temperature, and it can not be resumed when the temperature returns to be normal. So LCD module should be stored in required temperature.
2. LCD module should be stored in required humidity. Low humidity may add static, while high humidity may corrode the ITO circuit of LCD product. The suitable storage environment is: temperature: $22 \pm 5^{\circ}\text{C}$, humidity: $55\% \pm 10\%$.
3. Don't expose LCD module under sunshine, strong fluorescence or ultraviolet radiation for a long time. It should be stored in dark area.
4. LCD should be stored in static-protective polythene bag. Don't expose it in the air for a long time.
