

CURRENT MODE PWM CONTROLLER

DESCRIPTION

The AMC3842B/43B/44B/45B are fixed frequency current-mode PWM controllers specially designed for OFF-Line switching power supply and DC-to-DC converters with a minimum number of external components. These devices feature a trimmed oscillator for precise duty cycle control, a temperature compensated reference, high gain error amplifier, current sensing comparator, and high current totem pole output which is suitable for driving MOSFETs.

The under voltage lock-out (U.V.L.O.) is designed to operated with $200\mu A$ start-up current in typical, allowing an efficient bootstrap supply voltage design. The U.V.L.O. thresholds for the AMC3842B/44B are 16V (on) and 10V (off), which are ideal for off-line applications. The corresponding typical threshold for the AMC3843/45BB is 8.4V (on) and 7.6V (off). The AMC3842B/43B can operate within 100% duty cycle and the AMC3844B/45B can operate within 50% duty cycle.

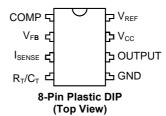

FEATURES

- Low Start-Up current (max. 200µA)
- Optimized for Off-Line and DC-to-DC Converters
- **■** Maximum Duty Cycle
- U.V.L.O. with Hysteresis
- Operating Frequency Up to 500KHz
- **■** Internal Trimmed Bandgap Reference
- High Current Totem Pole Output
- **■** Error Amplifier With Low Output Resistance
- Available in 8-Pin Plastic DIP and Surface Mount 14-Pin S.O.I.C.
- Identical pin assignment to earlier UC384X series.

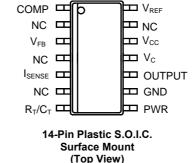

APPLICATIONS

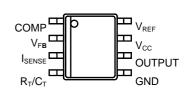

- Off-line flyback or forward converters.
- DC-to-DC buck or boost converter.
- Monitor Power Supply

PACKAGE PIN OUT

AVAILABLE OPTIONS									
Device	Start-UP Voltage	Hysteresis	Max. Duty Cycle						
AMC3842B	16V	6V	< 100%						
AMC3843B	8.4V	0.8V	< 100%						
AMC3844B	16V	6V	< 50%						
AMC3845B	8.4V	0.8V	< 50%

NT . 1 A 11	C . 1 . 11.1.1	TP 0 TP 1 A 1 d 1 49	T"				

All surface-mount packages are available in Tape & Reel. Append the letter "T" to part number (i.e. AMC384XBDT, or AMC384XBDMT).
 The letter "F" is marked for Lead Free process.

ABSOLUTE MAXIMUM RATINGS (Note 1)	
Supply voltage, V _{CC}	35V
Output current, I _O	± 1A
Analog inputs, V _I	-0.3V to 6.3V
Error amp output sink current, I _{SINK(EA)}	10mA
Power dissipation ($T_A = 25$ °C), P_D	1W
Maximum juncture temperature, T _J	150°C
Storage temperature range	-65°C to 150°C
Lead temperature (soldiering, 10 seconds)	260°C
Note 1: Exceeding these ratings could cause damage to the device. All voltages are with respect to Grounegative out of the specified terminal.	nd. Currents are positive into,

THERMAL DATA						
M PACKAGE:						
Thermal Resistance-Junction to Ambient, θ_{JA}	95 °C/W					
D PACKAGE:						
Thermal Resistance-Junction to Ambient, θ_{JA}	120 °C/W					
DM PACKAGE:						
Thermal Resistance-Junction to Ambient, θ_{JA}	165 °C/W					

$$\label{eq:JunctionTemperature} \begin{split} & \text{Junction Temperature Calculation:} \quad T_J = T_A + (P_D \times \theta_{JA}). \end{split}$$
 The θ_{JA} numbers are guidelines for the thermal performance of the device/pc-board system.

All of the above assume no ambient airflow.

Oscillator Frequency	f_{OSC}		100	500	KHz			
Operating Free-air Temperature	T_{A}	0		70	°C			

ELECTRICAL CHARACTERISTICS

Unless otherwise specified, these specifications apply over the operating ambient temperature for AMC384XB with $0^{\circ}\text{C} \leq T_{A} \leq 70^{\circ}\text{C}$; $V_{CC} = 15\text{V}$ (note 7); $R_{T} = 10\text{K}$; $C_{T} = 3.3\text{nF}$. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.

Note 7: Adjust V_{CC} above the start threshold before setting at 15V

Note 8: These parameters, although guaranteed, are not 100% tested in production prior to shipment

Note 9: Parameters are measured at trip point of latch with $V_{FB} = 2V$

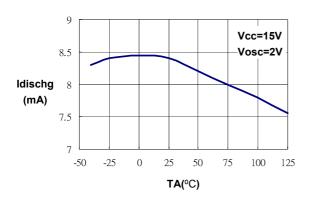

Note 10: Gain is measured between I_{SENSE} and COMP with the input changing from 0V to 0.8V

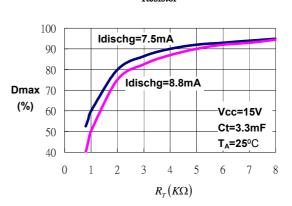

CHARACTERIZATION CURVES

Below characterization curves was referenced by Fig.4

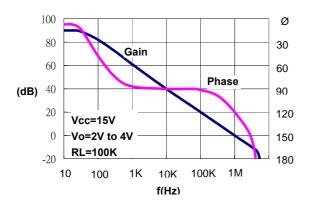

Oscillator Discharge Current vs.
Temperature

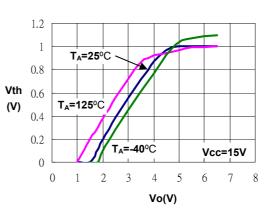

Maximum Output Duty Cycle vs. Timing Resistor

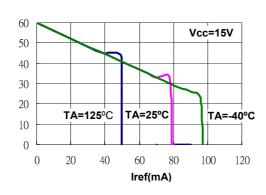

Error Amp Open-Loop Gain and Phase vs. Frequency

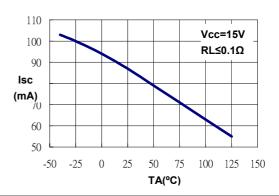

Current Sense Input Threshold vs. Error Amp Output Voltage.

Reference Voltage Change vs. Source Current.

Reference Short Circuit Current vs.
Temperature.

APPLICATION INFORMATION

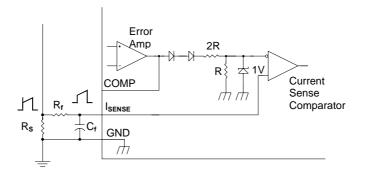

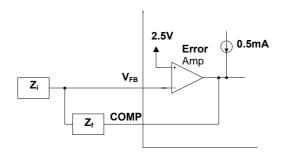

Fig. 1. Current Sense Circuit

Peak current (I_S) is set by: $I_{S(MAX)} = 1V/R_S$

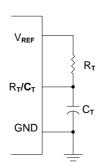

Fig. 2. Error Amplifier Configuration - the amplifier can source or sink up to 0.5mA

Fig. 3. Oscillator Section For $R_T < 5K$, $f = \frac{1.72}{R_T C_T}$

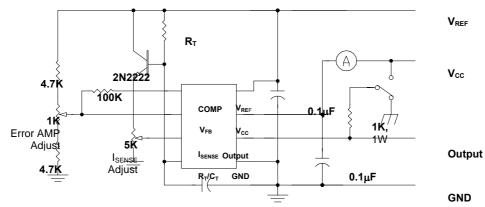

Fig. 4. Open-loop laboratory test fixture: Careful grounding techniques are necessary for high peak currents associated with capacitive loads. Timing and bypass capacitors should be connected to GND pin in a single point ground. The transistor and 5K potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to the I_{SENSE} pin

APPLICATION INFORMATION (continued)

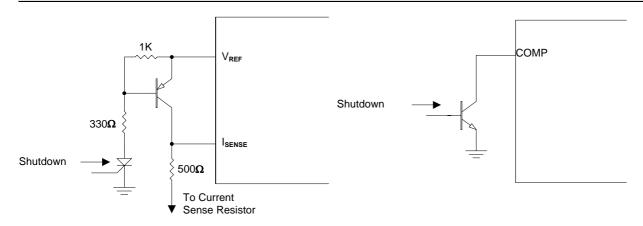

Fig. 5. Shutdown Techniques - there are two ways to shutdown the PWM controller: 1) raise the voltage at I_{SENSE} above 1V or, 2) pull the COMP below a voltage two diodes above ground.

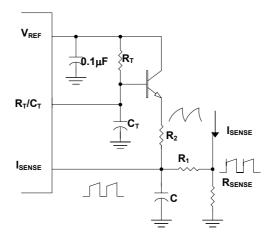

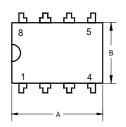

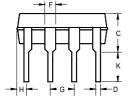

Fig 6. Slop Compensation – To achieve duty cycles over 50% for some applications, the above slope compensation technique is suggested by resistively summing a fraction of the oscillator ramp with the current sense signal.
