FRIFIMI®

- SAW Frequency Stabilization
- Fundamental-Mode Oscillation at 310.0 MHz
- 0.8" x 0.5" x 0.25" Metal Dip Case

This general-purpose oscillator is stabilized by surface-acoustic-wave (SAW) technology. Fundamental oscillation at 310.0 MHz eliminates all internally generated spurious outputs except integral harmonics of 310.0 MHz. The compact size of the rugged, metal, hermetically-sealed case makes this oscillator suitable for a variety of applications.

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling. COCOMCAUTION: Approval by the U.S. Department of Commerce is required prior to export of this device.

Notes:

- One or more of the following United States patents apply: 4,616,197; 4,610,681; and 4,761,616.
- 2. Unless noted otherwise, all specifications are listed at T_A = +25°C ±2°C, V_{CC} = nominal voltage ±0.01 VDC, and load impedance = 50 Ω with VSWR ≤ 1.5:1.
- 3. The design, manufacturing process, and specifications of this device are subject to change without notice.
- Applies to oscillator only and not to sidebands caused by external electrical or mechanical sources. (Dedicated external voltage regulation with low-frequency filtering for the DC power supply and proper circuit board layout are recommended for optimum spectral purity.)
- 5. For specified maximum operating load VSWR (any angle) at F_O. (No instability or damage will occur for any passive load impedance.)
- 6. For any combination of V_{CC} and T_A within the specified operating ranges.
- 7. Applies for any combination of Note 5 and 6 conditions.
