NOTES

- 1. P_R is the average optical power at the fiber face.
- 2. $P_{R,OMA}$ is the peak to peak optical power at the fiber face (Optical Modulation Amplitude)
$$P_{R,OMA} \equiv \frac{2P_R(ER-1)}{ER+1}$$
where ER is the extinction ratio (linear) of the optical source.
- 3. Bandwidth and Low Frequency Cutoff are measured with a small signal sinusoidal light source with -10dBm average power
- 4. Sensitivity is measured with an optical source with an extinction ratio of 3dB. For sensitivity measurements at 2 and 4Gbps, bandwidth limiting of the TIA is assumed to be implemented at the front end of the post amplifier.
- 5. Rise/Fall times are corrected for optical source Rise/Fall

times. $T^2_{TIA} = T^2_{MEASURED} - T^2_{OPTICAL}$

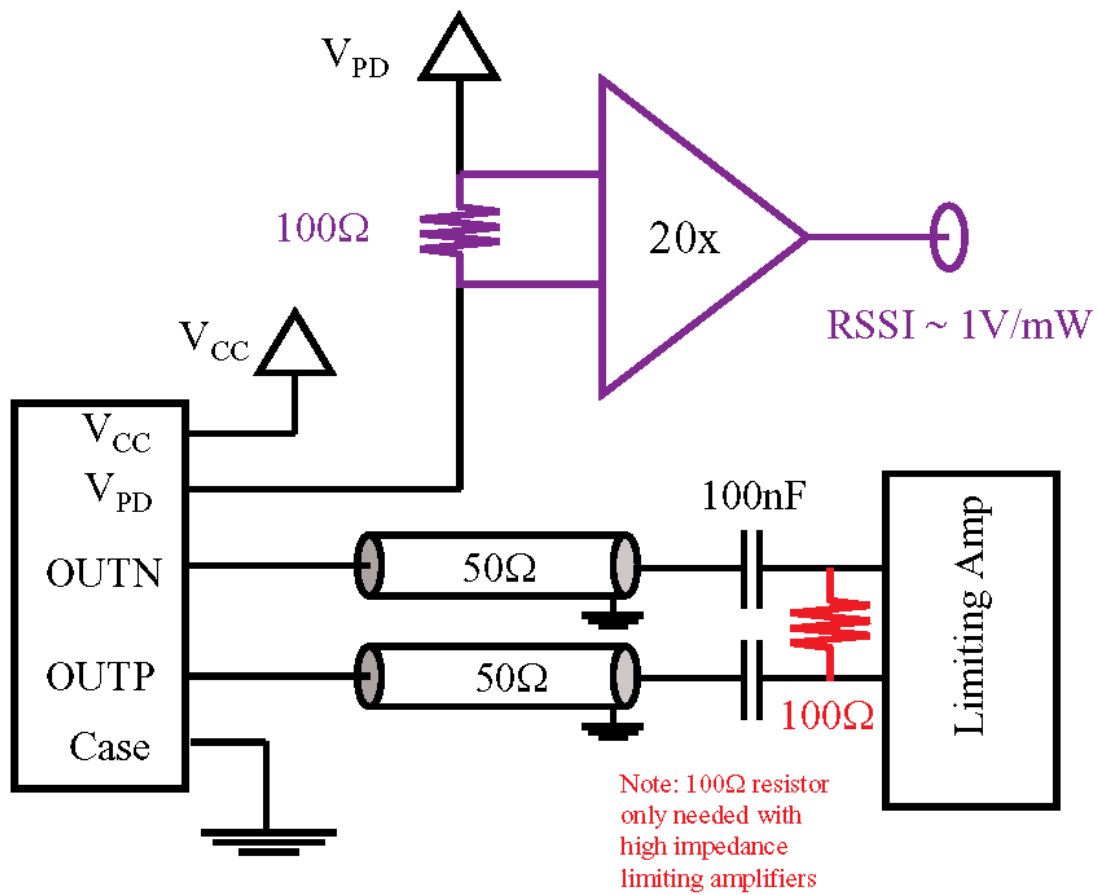

- 6. Value shown is with no external power supply filtering.
- 7. Group delay is a sensitive measurement to package interface, and includes the effects of PD, TIA and package. Measurement is made with TO leads as short as possible.
- 8. DJ_{TIA} is specified as contributed DJ by the TIA, obtained from $DJ^2_{TIA} = DJ^2_{TOTAL} - DJ^2_{OPTICAL}$
- 9. RJ_{TIA} is specified as contributed DJ by the TIA, obtained from $RJ^2_{TIA} = RJ^2_{TOTAL} - RJ^2_{OPTICAL}$
- 10. The electrical performance of the ROSA is dependent upon the quality of the electrical connection between the TO can and the circuit board. AOC cannot guarantee all performance specifications for parts without the flex circuit attached.

ADVANCED OPTICAL COMPONENTS

Finisar's ADVANCED OPTICAL COMPONENTS division was formed through strategic acquisition of key optical component suppliers. The company has led the industry in high volume Vertical Cavity Surface Emitting Laser (VCSEL) and associated detector technology since 1996. VCSELs have become the primary laser source for optical data communication, and are rapidly expanding into a wide variety of sensor applications. VCSELs' superior reliability, low drive current, high coupled power, narrow and circularly symmetric beam and versatile packaging options (including arrays) are enabling solutions not possible with other optical technologies. ADVANCED OPTICAL COMPONENTS is also a key supplier of Fabrey-Perot (FP) and Distributed Feedback (DFB) Lasers, and Optical Isolators (OI) for use in single mode fiber data and telecommunications networks
